

Author guidelines

All articles must follow APA 7th edition guidelines. Manuscripts should be typed in Times New Roman, 12-point font, double-spaced, with 1-inch margins on all sides. Text should be left-aligned (not justified). In-text citations and the reference list must adhere to APA style, including DOIs for journal articles where available. Headings should be properly formatted following APA level headings. Additionally, all tables and figures should be clearly labeled and placed either in-text or after the reference section.

Language style

The preferred language style is American English.

Title

The title should be brief, avoiding implicit terms and, where feasible, reflecting the main outcome or conclusion of the manuscript. Avoid using abbreviations in the title.

Authors and affiliations

Authors' names should be listed together, separated by commas. Ensure accuracy in author names, as they will be used in official indexes. Affiliations must be linked to the respective author using superscript numbers.

Correspondence

Corresponding authors should be indicated with an asterisk (*) in the author list. Provide the exact email address for correspondence in a separate section.

Equal contributions

Authors who have contributed equally should be identified with a symbol (†) in the author list of the manuscript files uploaded at the time of submission.

Abstract

The abstract should clearly convey the general significance and the conceptual advancements of the work to a wide audience. It should be limited to 200 words, avoid abbreviations, and not include citations, figures, or tables.

Keywords

For all article types, a minimum of three and a maximum of seven keywords are required.

Text

The manuscript must be double-spaced, in Times New Roman, 12-point font, left-aligned, and include page and line numbers to facilitate the review process. The manuscript should be written in Word format.

Nomenclature

Abbreviations should be minimized. Avoid non-standard abbreviations, and if used, they must be defined the first time they appear in the main text.

Sections

The manuscript should be organized with headings and subheadings, following the structure appropriate for your field and research. You may include up to three heading levels in your manuscript (e.g., 3.2.2 Heading Title).

Ethics

All research articles involving human participants must have received approval from an Ethics Committee or Institutional Review Board (IRB) and must provide the corresponding approval code. For more information, please [visit our Ethic Code](#).

Acknowledgments

This section should briefly recognize the contributions of colleagues, institutions, or agencies that supported the authors' work.

Supplementary Materials: Outline any supplementary materials published online along with the manuscript (e.g., figures, tables, videos, spreadsheets). Name and title each item, for example, “Figure S1: [title]”, “Table S1: [title]”, and so on.

Author Contributions: Each author should have made significant contributions to the work's conception, design, data acquisition, analysis, or interpretation, or created new software used in the research, drafted, or substantively revised the manuscript. Authors must approve the final submission (and any substantial revisions involving their contributions) and take responsibility for their work, ensuring the accuracy and integrity of the research are maintained. For multi-author research articles, include a brief statement of each author's specific contributions, using CRediT taxonomy terms (e.g., “Conceptualization, X.X. and Y.Y.”; “Methodology, X.X.”; “Validation, X.X., Y.Y. and Z.Z.”; “Writing – Review & Editing, X.X.”). Further

information on CRediT taxonomy is available here: <https://credit.niso.org/>. To qualify for authorship of a manuscript, the following criteria must be met:

- A significant contribution to the conception or design of the work, or to the acquisition, analysis, or interpretation of data; AND
- Drafting or critically reviewing the work for significant intellectual content; AND
- Approval of the final version to be published; AND
- Agreement to take responsibility for all aspects of the work, ensuring that questions about its accuracy or integrity are appropriately addressed.

Individuals who contributed to the work but do not meet authorship criteria should be acknowledged in the acknowledgments section. Detailed authorship guidelines are available from the International Committee of Medical Journal Editors (ICMJE). See: <https://www.icmje.org/recommendations/browse/roles-and-responsibilities/defining-the-role-of-authors-and-contributors.html>

Any changes to the author list require approval from all authors, including those removed. The corresponding author should serve as the primary liaison between the editor and co-authors, keeping them informed and involved in key publication decisions. We may request confirmation that all authors meet authorship requirements.

Funding: Disclose all sources of funding for the study, including specific grants for research or publication costs. Funders may require article processing charges (APC) to be correctly identified to ensure coverage, so be precise. Indicate in this section either “This research received no external funding” or “This research was funded by [funder name], grant number [XXX]”, or “The APC was funded by [XXX]”. Confirm accuracy using CrossRef’s funding search to prevent future funding issues.

Informed Consent Statement: For studies involving human subjects, include “Informed consent was obtained from all subjects”. For waived patient consent, explain why, or if not applicable, omit this statement. If identifiable patient data is included, confirm with “Written informed consent has been obtained from the patient(s) to publish this paper”.

Data Availability Statement: Specify where supporting data is accessible, including links to public datasets analyzed or generated in the study. This statement can be omitted if the study did not report any data.

Conflicts of Interest: Authors should disclose any potential conflicts that could influence the research. If there is no conflict, state “The authors declare no conflict of interest”. Detail any influence funders had on the research project, study design, data interpretation, or decision to publish. State “The sponsors had no role in the design, execution, interpretation, or writing of the study” if applicable.

References: List references sequentially as they appear in the text, including figure and table captions. Using reference management software like EndNote or Zotero is recommended to avoid errors and duplication. Citing data, code, and other research materials is encouraged.
